Site Audit: Full Report

brightai.live

Generated on September 8, 2026

• The overall technical health score of your website is very strong and has remained completely stable at 95 percent.

• The health score measuring how easily artificial intelligence search tools can read and understand your website is also stable at 87 percent.

• The number of critical errors remains unchanged at 35, and all of these are related to conflicting language tags that help search engines show the correct language version of a page to visitors in different countries.

• The number of website warnings decreased slightly by 1, bringing the total down to 470.

• The most frequent warning involves 318 links pointing to other websites that no longer work, which is a decrease of 1 compared to the previous period.

• There are 137 pages where the amount of actual readable text is too low compared to the technical code of the page.

• There are 15 pages with a very low word count of fewer than 200 words, which can make it difficult for search engines to view them as high-quality pages.

• Additional minor notices indicate that 57 pages need their text optimized for better clarity, 27 pages have only one link pointing to them from other parts of your website, and 10 pages are currently blocked from being read by search engines.

• This report provides a snapshot of current activity. Deeper trend analysis will become more reliable with a longer data history.

35 hreflang conflicts within page source code **About this issue:** If you're running a multilingual website, it is necessary to help users from other countries find your content in the language that is most appropriate for them. This is where the hreflang (rel="alternate" hreflang="x") attribute comes in handy. This attribute helps search engines understand which page should be shown to visitors based on their location. It is very important to properly synchronize your hreflang attributes within your page's source code, otherwise you may experience unexpected search engine behavior. For more information, see this article. **How to fix:** To avoid any conflicts, we recommend that you review your hreflang attributes within your page's source code and fix any of the following issues: - Conflicting hreflang and rel=canonical URLs - Conflicting hreflang URLs - No self-referencing hreflang URLs	35 0
0 pages returned 5XX status code	0 0
0 pages returned 4XX status code	0 0
0 pages don't have title tags	0 0

0 issues with old security protocol	0 0
0 issues with incorrect certificate name	0 0

Warnings

Warnings

Project name: k

Warnings	Amount
318 external links are broken **About this issue:** Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. **How to fix:** Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource. If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.	318 ↓1
137 pages have low text-HTML ratio **About this issue:** Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. **How to fix:** Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	137 0

Warnings	Amount
15 pages have a low word count **About this issue:** This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video **How to fix:** Improve your on-page content and be sure to include more than 200 meaningful words.	15 0
0 external images are broken	0 0
0 links on HTTPS pages lead to HTTP page	0 0
0 pages don't have enough text within the title tags	0 0
0 pages have too much text within the title tags	0 0
0 pages don't have an h1 heading	0 0
0 pages have duplicate H1 and title tags	0 0
0 pages don't have meta descriptions	0 0
0 pages have too many on-page links	0 0
0 URLs with a temporary redirect	0 0
0 images don't have alt attributes	0 0
0 pages have too many parameters in their URLs	0 0
0 pages have no hreflang and lang attributes	0 0
0 pages don't have character encoding declared	0 0

Warnings	Amount
0 pages don't have doctype declared	0 0
0 pages have incompatible plugin content	0 0
0 pages contain frames	0 0
0 pages have underscores in the URL	0 0
0 outgoing internal links contain nofollow attribute	0 0
Sitemap.xml not indicated in robots.txt	0 0
Sitemap.xml not found	0 0
Homepage does not use HTTPS encryption	0 0
0 subdomains don't support SNI	0 0

Notices

Notices

Project name: k

Notices	Amount
57 pages require content optimization **About this issue:** Content optimization enhances on-page clarity, improves user engagement, snippet eligibility, and topical authority. It's especially important for pages with a lot of content. **How to fix:** - Follow the advice provided in the error details for each page. - Improve your content with AI using the Content Optimizer tool.	57 0
27 pages have only one incoming internal link **About this issue:** Having few incoming internal links means little to no visits or chances of being placed in search results. **How to fix:** Add more incoming internal links to pages with important content.	27 0
10 pages are blocked from crawling **About this issue:** If a page cannot be accessed by search engines, it will never appear in search results. A page can be blocked from crawling either by a robots.txt file or a noindex meta tag. **How to fix:** Make sure that pages with valuable content are not blocked from crawling by mistake.	10 0
2 subdomains don't support HSTS **About this issue:** HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. **How to fix:** Use a server that supports HSTS.	2 0

Notices	Amount
2 pages have low semantic HTML usage **About this issue:** The ratio of semantic HTML tags to other HTML tags is low. Semantic HTML adds structure to content and improves indexing accuracy, helping search engines better understand page hierarchy and key information. **How to fix:** Make sure your content is well organized and use the most common semantic HTML. Learn more	2 0
1 orphaned page in sitemaps **About this issue:** An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. **How to fix:** Review all orphaned pages in your sitemap.xml files and do either of the following: - If a page is no longer needed, remove it - If a page has valuable content and brings traffic to your website, link to it from another page on your website - If a page serves a specific need and requires no internal linking, leave it as is	1 0
0 pages have more than one H1 tag	0 0

Hreflang conflicts within page source code

Project name: k

Detailed Issue Description

About this issue:
If you're running a multilingual website, it is necessary to help users from other countries find your content in the language that is most appropriate for them. This is where the hreflang (rel="alternate" hreflang="x") attribute comes in handy. This attribute helps search engines understand which page should be shown to visitors based on their location. It is very important to properly synchronize your hreflang attributes within your page's source code, otherwise you may experience unexpected search engine behavior. For more information, see this article.
How to fix:
To avoid any conflicts, we recommend that you review your hreflang attributes within your page's source code and fix any of the following issues:
- Conflicting hreflang and rel=canonical URLs
- Conflicting hreflang URLs
- No self-referencing hreflang URLs

Detailed Warnings

Broken external links

Project name: k

Detailed Issue Description

About this issue:
Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded.
Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website.
How to fix:
Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource.
If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.

Only the first 50 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.

Low text to HTML ratio

Detailed Issue Description

About this issue:
Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less.
Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results.
Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.
How to fix:
Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

Only the first 50 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.

Low word count

Detailed Issue Description

About this issue:
This issue is triggered if the number of words on your webpage is less than 200.
The amount of text placed on your webpage is a quality signal to search engines.
Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts.
For more information, please view this video
How to fix:
Improve your on-page content and be sure to include more than 200 meaningful words.

Content not optimized

Project name: k

Detailed Issue Description

About this issue:
Content optimization enhances on-page clarity, improves user engagement, snippet eligibility, and topical authority. It's especially important for pages with a lot of content.
How to fix:
- Follow the advice provided in the error details for each page.
- Improve your content with AI using the Content Optimizer tool.

Only the first 50 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.

Pages with only one internal link

Detailed Issue Description

About this issue:
Having few incoming internal links means little to no visits or chances of being placed in search results.
How to fix:
Add more incoming internal links to pages with important content.

Blocked from crawling

Detailed Issue Description

About this issue:
If a page cannot be accessed by search engines, it will never appear in search results. A page can be blocked from crawling either by a robots.txt file or a noindex meta tag.
How to fix:
Make sure that pages with valuable content are not blocked from crawling by mistake.

No HSTS support

Detailed Issue Description

About this issue:
HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support.
How to fix:
Use a server that supports HSTS.

Low Semantic HTML usage

Detailed Issue Description

About this issue:
The ratio of semantic HTML tags to other HTML tags is low. Semantic HTML adds structure to content and improves indexing accuracy, helping search engines better understand page hierarchy and key information.

How to fix:
Make sure your content is well organized and use the most common semantic HTML. Learn more

Orphaned sitemap pages

Detailed Issue Description

About this issue:
An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally.
How to fix:
Review all orphaned pages in your sitemap.xml files and do either of the following:
- If a page is no longer needed, remove it
- If a page has valuable content and brings traffic to your website, link to it from another page on your website
- If a page serves a specific need and requires no internal linking, leave it as is
